ULTIMATE CORRELATION SCANNER:

This indicator has been designed to quickly identify the highest correlations for any pair in the market. And you don't have to conduct hours of research, analyzing dozens of columns, rows or tables. As this indicator gives you the most important information, quickly and easily.

Using this indicator, you can create a system that allows you to take advantage of the ongoing correlation dynamics that are always present in the market.

IMPORTANT FACTOR TO KEEP IN MIND:

***Correlations exist because of ongoing patterns in global capital flows.
As capital tends to flow in unison into (and out of) risk sensitive currencies.
And the same is true for capital flowing in unison into (and out of) inflation sensitive currencies. Especially around certain regions.***

A prime example of this is how the commodity currencies are generally correlated across all time frames, due to their inflation sensitive nature.

Features:

- It can monitor any symbol in your platform. Including crypto, commodities, indices, ETF's etc.
- You can analyze any time frame, by simply selecting the time frame on your Metatrader header.

This indicator will automatically analyze every pair in your Metatrader platform. And will immediately give you the highest correlation results. For both positive and negative correlations.

This will save you an enormous amount of time and effort. As you won't have to spend countless hours analyzing dozens of columns, rows or tables.

And this will allow you to focus on other aspects of your trading. Such as further technical (or fundamental analysis). This will also give you more time to find other trading opportunities.

Indicator Parameters:

- **Pairs:** Here is where you select the pair that you wish to analyze.

For example:

If you want to analyze the EURGBP, you simply enter it in this field and the indicator will return the best correlations against the EURGBP.

- **Cell Width:** Here you can select your desired cell width for the results table.
- **Lookback Period:** Select how many candles you want the indicator to go back and analyze.
